

Message from the man who plays as a Founder of AIGA VN

..... As a person who has worked in the industrial gas field for more than 40 years, I truly understand that it is high risky for these products in production, use, transportation ... and I have been used to see a lot of incidents and accidents happened due to a low awareness about the industrial gas products in many parts of the world ... It really hurts to see a serious injuries or tragic deaths

Mr. Haruhiko Yasuga

The 4th General Director of Vietnam Japan Gas JSC

... In the streets of Vietnam. I see many people carrying a compressed gas cylinder on motorbikes ... It is an extremely dangerous job, but they don't seem to be aware of it.

In the developed countries around the world in general and Japan in particular, has been liked that for many decades ago ... I am a Japanese, but I love Vietnam, I really want to bring knowledge , experiences to transfer and raise awareness for Vietnamese people to reduce risks to the lowest.

The establishment of VIGA is impossible because of current regulations. But I still do not give up my dream and ambition to build a safe culture in the field of industrial gas and environmental protection for the Vietnamese community

...

Then, my dream was able to come true when the foreign industrial gas enterprises operating in Vietnam responded to my call, plus with the approval of AIGA, we were able to establish AIGA Rep. Office in Vietnam with unchanged mission and goals.

As the key roles of the establishment of AIGA Rep. Office in Vietnam, together with the cooperation of the foreign industrial gases Enterprises operating in Vietnam, and the support of the Vietnamese government, I firmly believe that the ambition for a safety culture in the industrial gas field in Vietnam is surely successful
